Green Future Association: Developing Sustainable Practices

What is the point of this at all?

"Sustainable Development Procedures in Non-Governmental Organizations" are a set of principles, practices, and actions that help non-governmental organizations (NGOs) achieve sustainable development goals. **Sustainable development refers to a balance between social, economic, and environmental aspects of an organization's activities while considering long-term impacts.**

Green Future Association: Developing Sustainable Practices

What is the point of this at all?

Introducing sustainable development procedures in non-governmental organizations not only helps them **work more effectively** for the common good but also **builds long-term sustainability and responsibility in their actions**.

It also helps organizations **attract financial support, volunteers, and other partners** interested in the sustainable development of society.

What should we not forget?

Organizations always operate within a specific environment, which consists of both external and internal factors that influence their actions.

In the context of sustainable development, these factors play a crucial role in shaping an organization's activities and their impact on society, the environment, and the economy.
